## Pretrained CNN Features and Fine-Tuning

### Danna Gurari

University of Colorado Boulder Spring 2022

https://home.cs.colorado.edu/~DrG/Courses/NeuralNetworksAndDeepLearning/AboutCourse.html

#### Review

- Last lecture:
  - Regularization
  - Parameter norm penalty
  - Early stopping
  - Dataset augmentation
  - Dropout
  - Batch Normalization
- Assignments (Canvas)
  - Lab assignment 2 due Wednesday
- Questions?

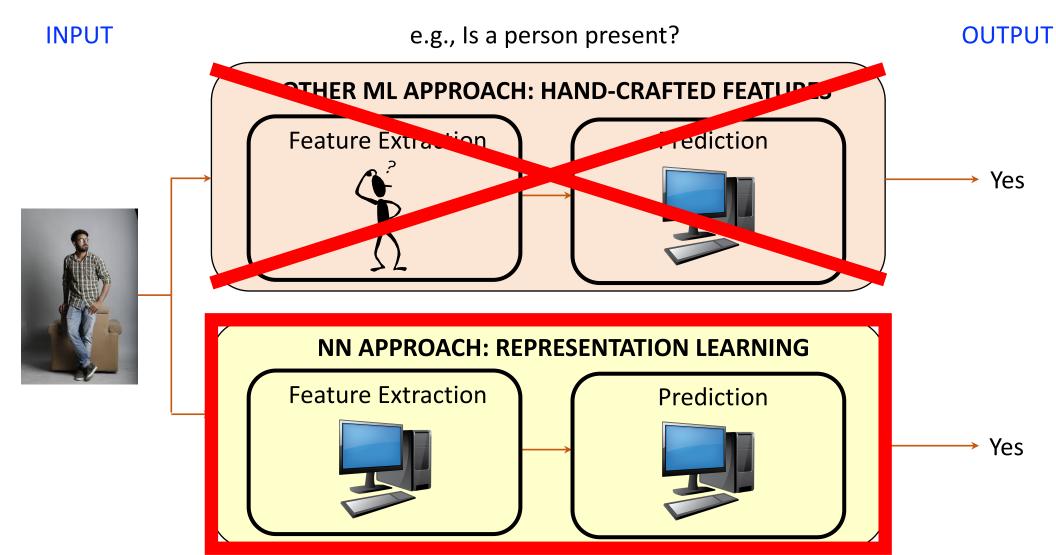

#### Today's Topics

- Representation learning
- Pretrained features
- Fine-tuning
- Training neural networks: hardware & software
- Programming tutorial

### Today's Topics

- Representation learning
- Pretrained features
- Fine-tuning
- Training neural networks: hardware & software
- Programming tutorial

#### Recall: Motivation for Neural Networks (NNs) Over Other Machine Learning (ML) Approaches

#### What Neural Networks Learn

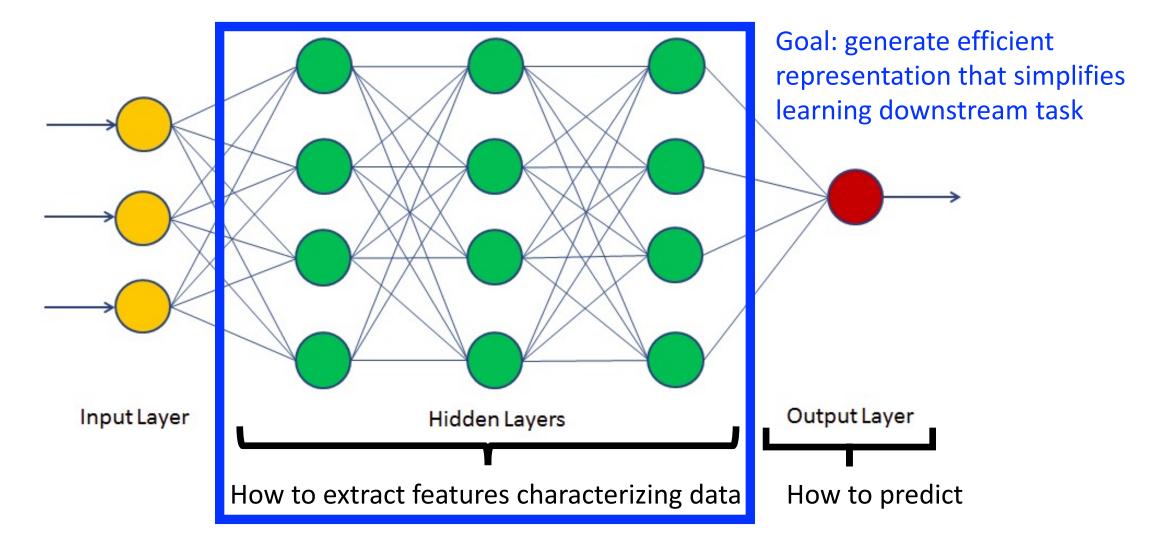

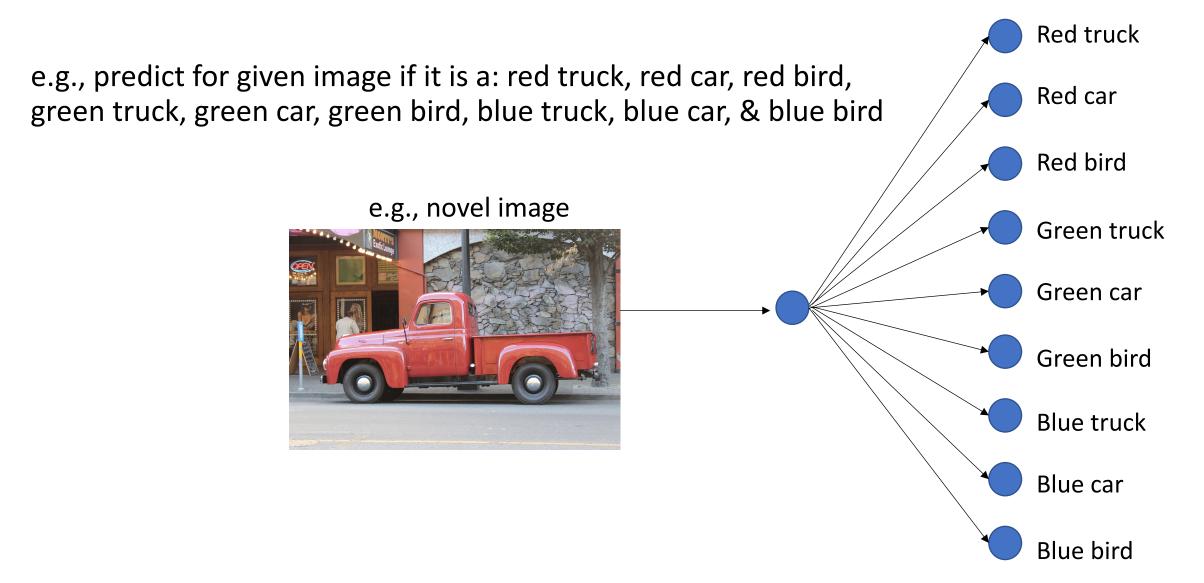

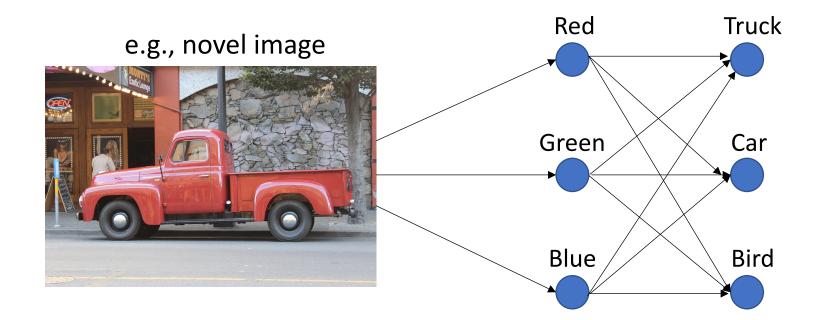

Figure Source: https://www.datacamp.com/community/tutorials/neural-network-models-r

#### How to Efficiently Describe/Represent Images?

#### How to Efficiently Describe/Represent Images?

e.g., predict for given image if it is a: red truck, red car, red bird, green truck, green car, green bird, blue truck, blue car, & blue bird

Can design a more efficient model to first capture color and then objects (greater parameter efficiency using **hierarchical layers** of features)!

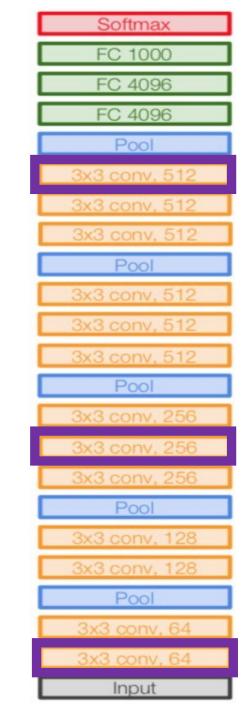

#### What representations are CNNs learning?

### Key Tricks for Interpreting Representations

- Visualize filters and resulting activation maps
- Retrieve similar images based on feature similarity
- Analyze images that maximally activate units in a network

#### Key Tricks for Interpreting Representations

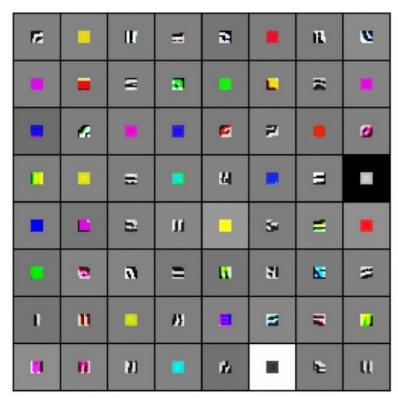

- Visualize filters and resulting activation maps
- Retrieve similar images based on feature similarity
- Analyze images that maximally activate units in a network

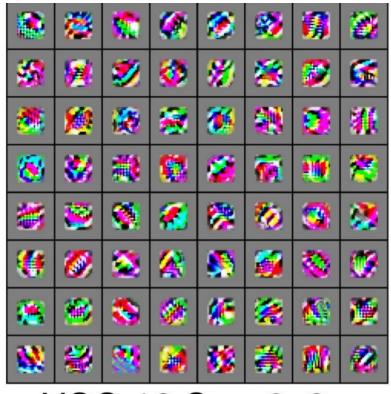

#### Inspecting What Was Learned: VGG16

Figure Source (edited to fix mistakes): https://medium.com/deeplearning-g/cnn-architectures-vggnet-e09d7fe79c45

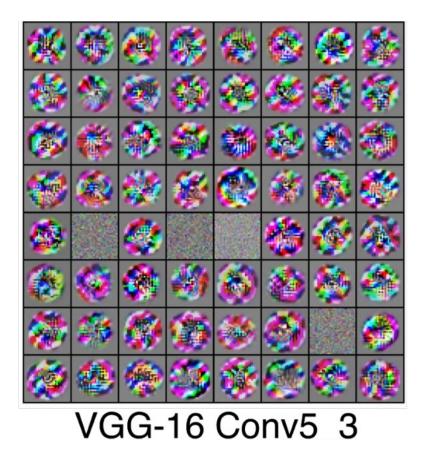

#### VGG16: Filters at 3 Convolutional Layers

VGG-16 Conv1\_1

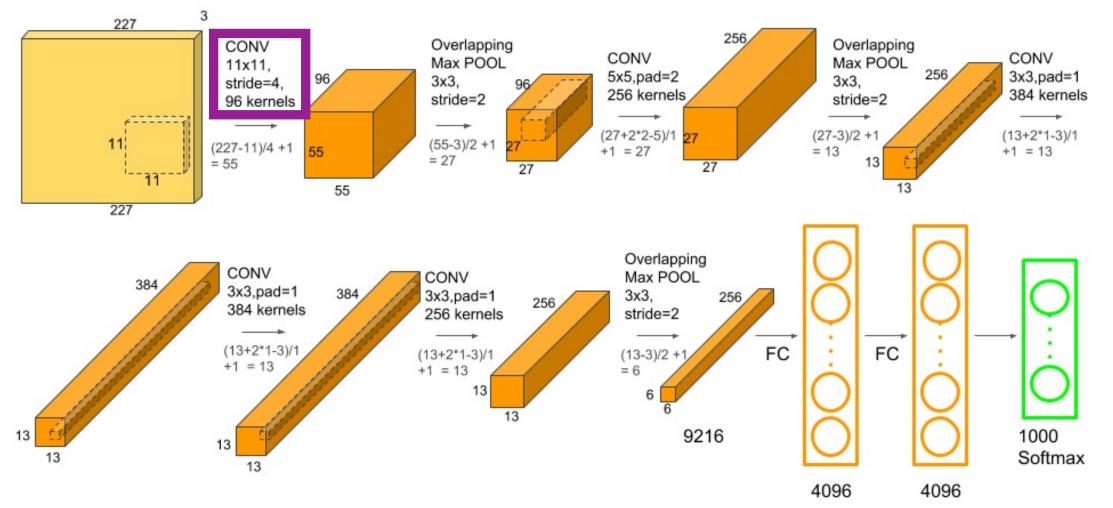

VGG-16 Conv3\_2

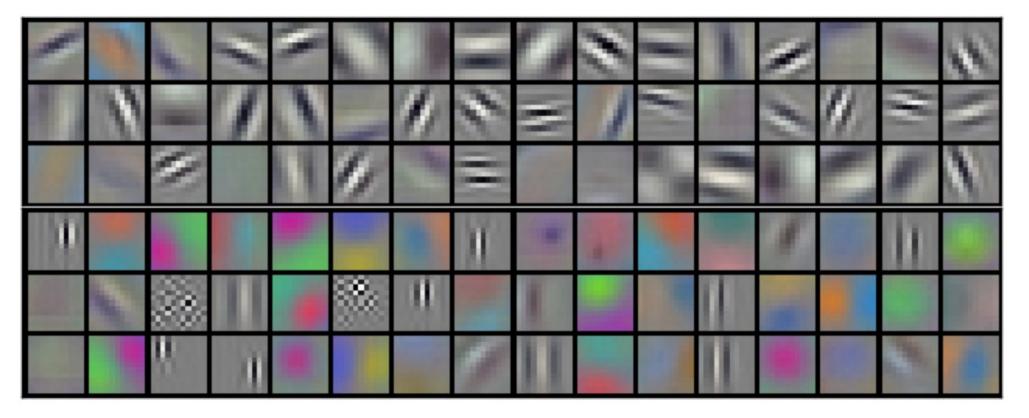

Filters evolve from detecting simple features (e.g., edges, colors) to complex structures

http://cs231n.stanford.edu/slides/2018/cs231n\_2018\_lecture05.pdf

#### Inspecting What Was Learned: AlexNet

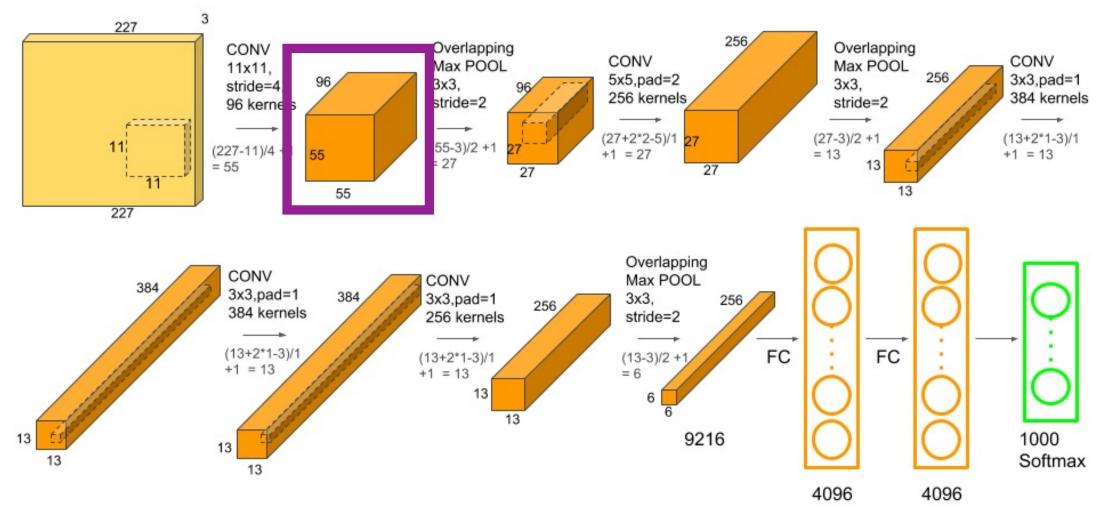

#### AlexNet: 96 Filters in Convolutional Layer 1

#### Filters for detecting different frequencies, orientations, and colors!

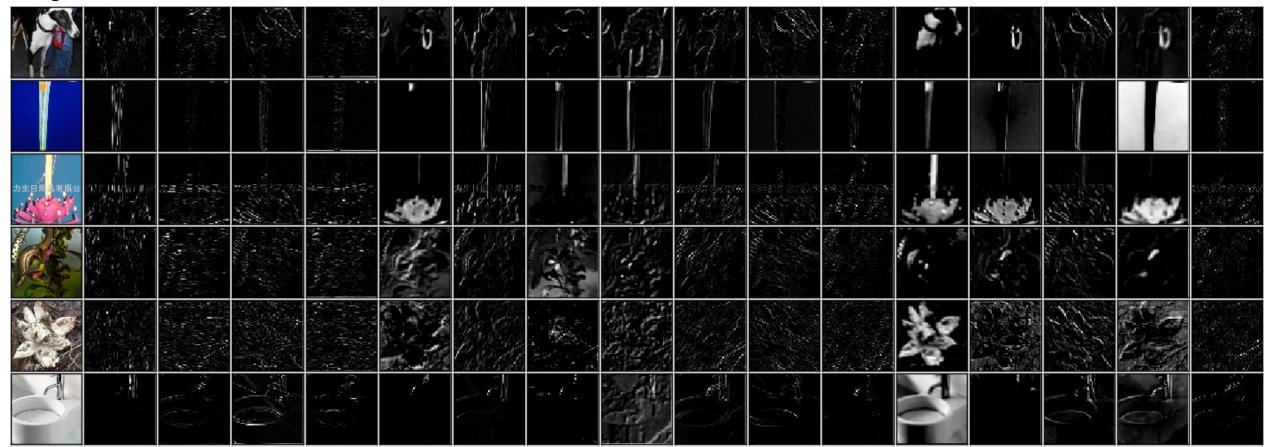

Krizhevsky, Sutskever, and Hinton. ImageNet Classification with Deep Convolutional Neural Networks. NeurIPS 2012.

#### AlexNet: Example Activation Maps

### AlexNet: Example Activation Maps (Recall Each Map Results from One Filter)

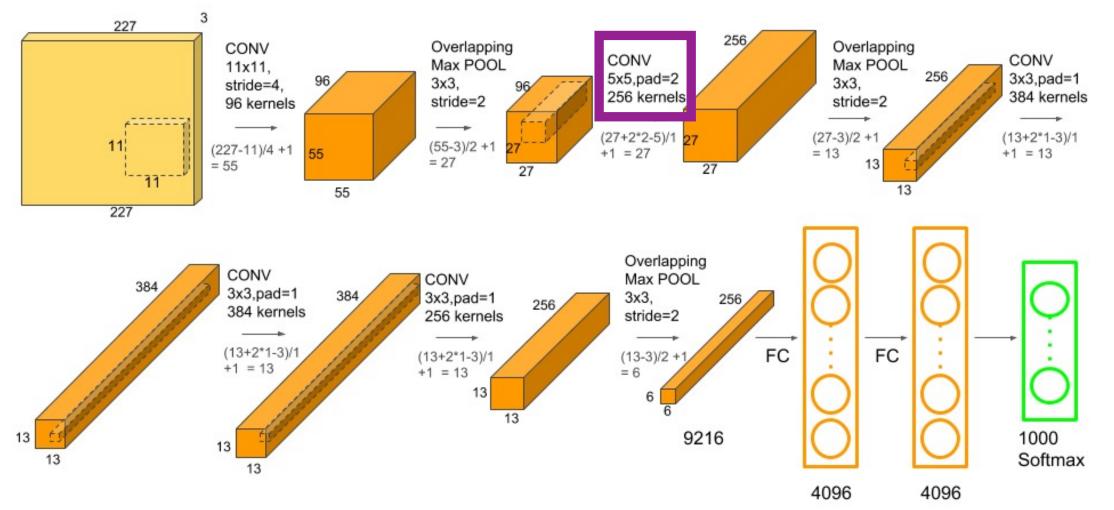

Images

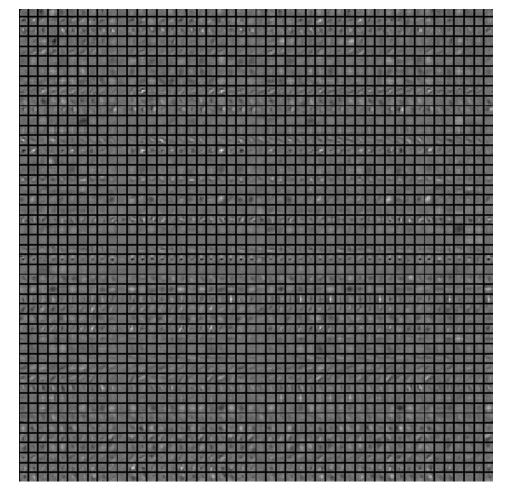

#### Frequencies, orientations, and colors are detected

Krizhevsky, Sutskever, and Hinton. ImageNet Classification with Deep Convolutional Neural Networks. NeurIPS 2012.

#### Inspecting What Was Learned: AlexNet

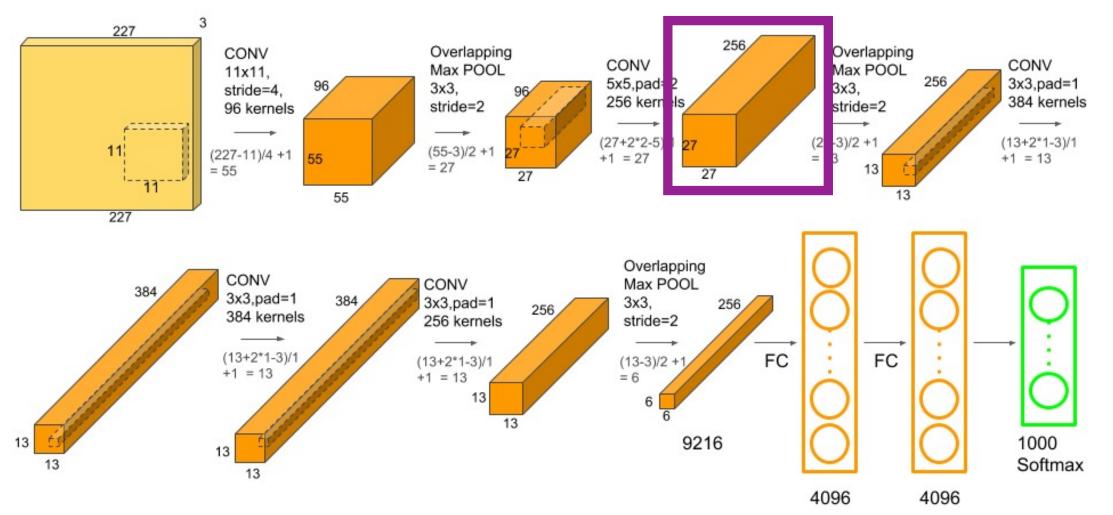

#### AlexNet: 256 Filters in Convolutional Layer 2

Challenging to interpret these learned filters

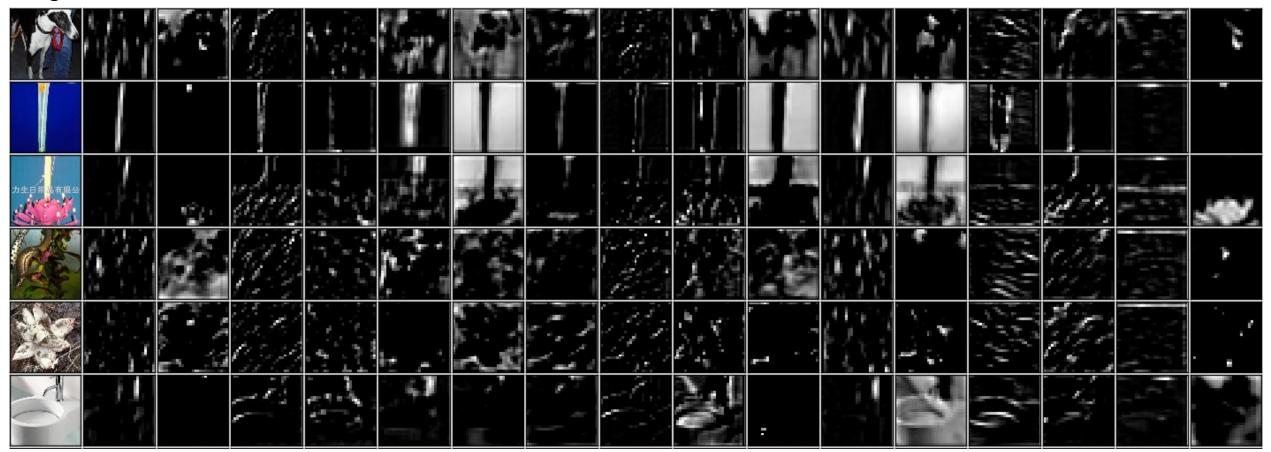

https://cs231n.github.io/understanding-cnn/

#### Inspecting What Was Learned: AlexNet

### AlexNet: Sampled Activation Maps (Recall Each Map Results from One Filter)

Images

#### Can you infer anything about what features the filters extracted?

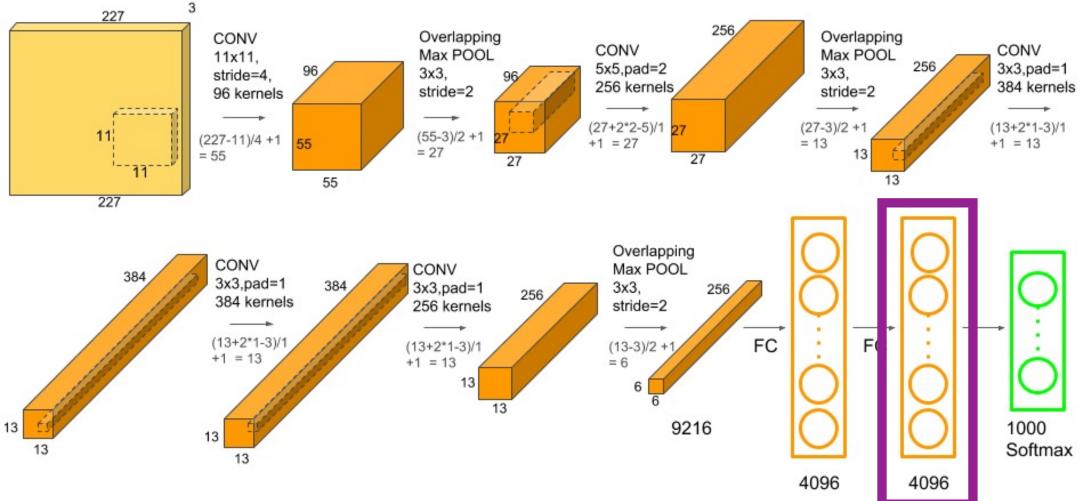

Krizhevsky, Sutskever, and Hinton. ImageNet Classification with Deep Convolutional Neural Networks. NeurIPS 2012.

### Key Tricks for Interpreting Representations

• Visualize filters and resulting activation maps

- Retrieve similar images based on feature similarity
- Analyze images that maximally activate units in a network

#### Inspecting What Was Learned: AlexNet

#### AlexNet: Retrieve Images with Similar FC7 Vectors

Test Training images with smallest Euclidean distance between images its FC7 feature activation and that of the test image

What can you infer about what the FC7 feature represents?

- Image semantics regardless of illumination and object pose

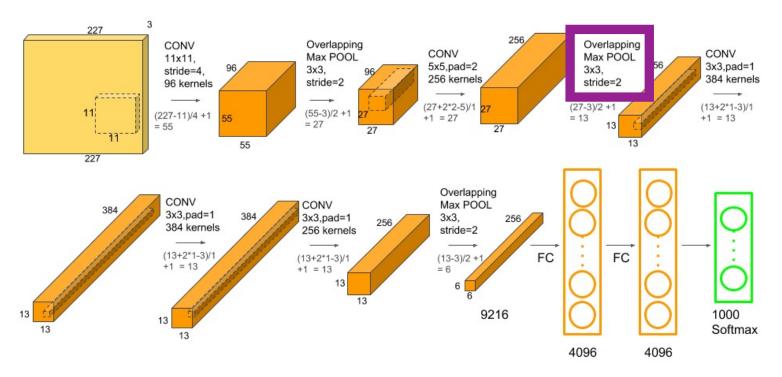

Krizhevsky, Sutskever, and Hinton. ImageNet Classification with Deep Convolutional Neural Networks. NeurIPS 2012.

### Key Tricks for Interpreting Representations

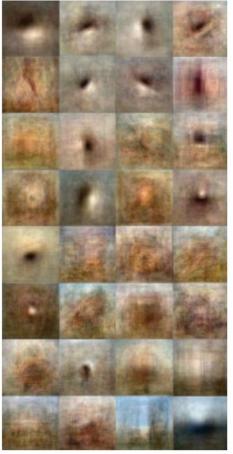

- Visualize filters and resulting activation maps
- Retrieve similar images based on feature similarity
- Analyze images that maximally activate units in a network

## AlexNet: Images that Lead to Maximal Activation for Singled Out Neural Network Units

Mean images from the 100 images which fire the most (i.e., highest activation scores):

Source: https://www.learnopencv.com/wpcontent/uploads/2018/05/AlexNet-1.png

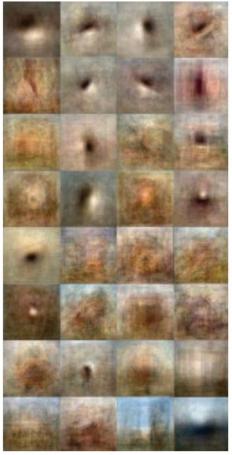

Bolei Zhou et al. Learning Deep Features for Scene Recognition using Places Database. NIPS 2014.

## AlexNet: Images that Lead to Maximal Activation for Singled Out Neural Network Units

Mean images from the 100 images which fire the most (i.e., highest activation scores):

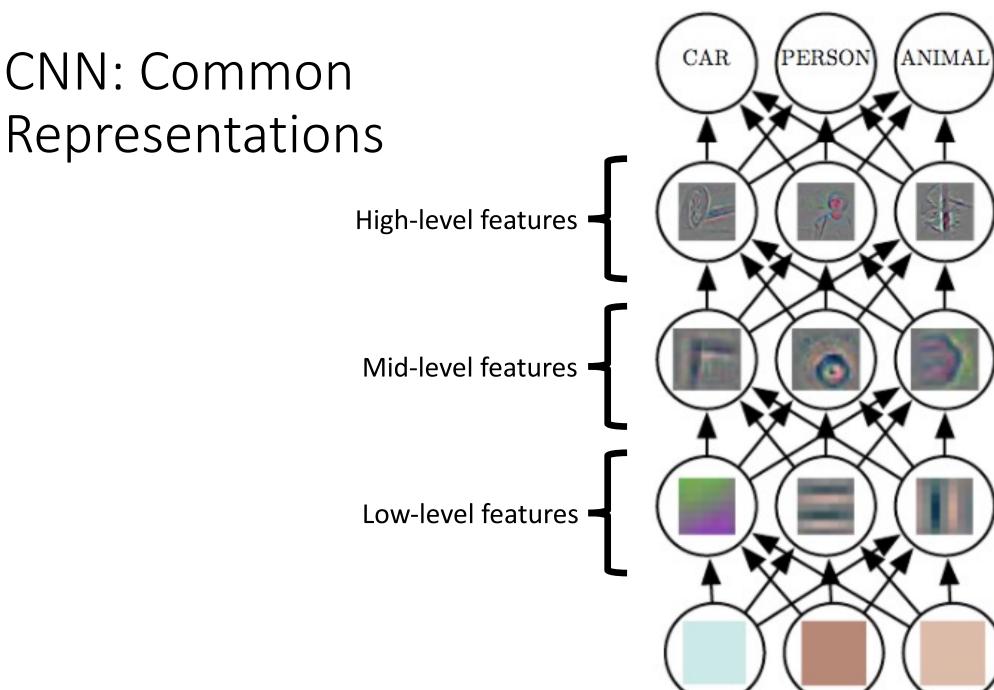

## What type of features does the model appear to detect?

Bolei Zhou et al. Learning Deep Features for Scene Recognition using Places Database. NIPS 2014.

#### Summary: Key Tricks for Interpreting Representations

- Visualize filters and resulting activation maps
- Retrieve similar images based on feature similarity
- Analyze images that maximally activate units in a network
- And many newer techniques not covered in this course...

Deep Learning, Ian Goodfellow, Yoshua Bengio, and Aaron Courville

3rd hidden layer (object parts)

Output

(object identity)

2nd hidden layer (corners and contours)

1st hidden layer (edges)

> Visible layer (input pixels)

#### Online Tools for Investigating CNNs

- https://cs231n.github.io/understanding-cnn/

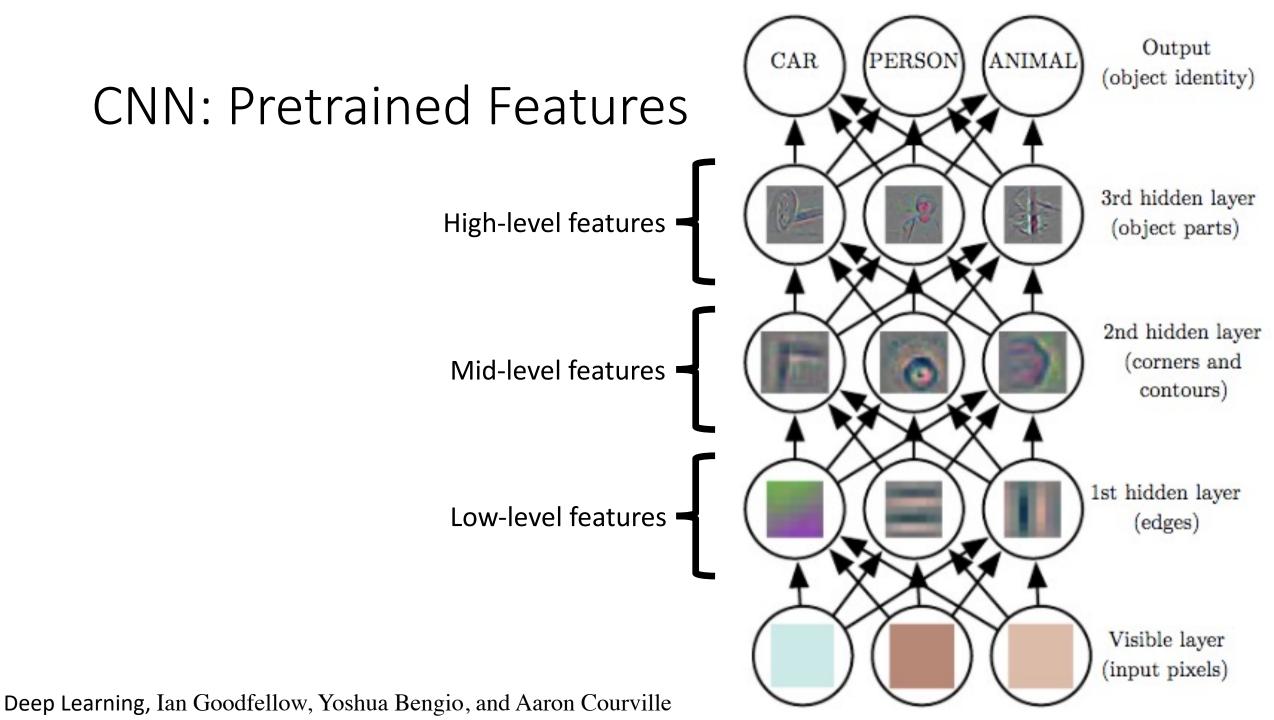

### Today's Topics

- Representation learning
- Pretrained features
- Fine-tuning
- Training neural networks: hardware & software
- Programming tutorial

#### **CNN:** Pretrained Features

A representation of the data extracted inside a network (rather than the input or predicted output)

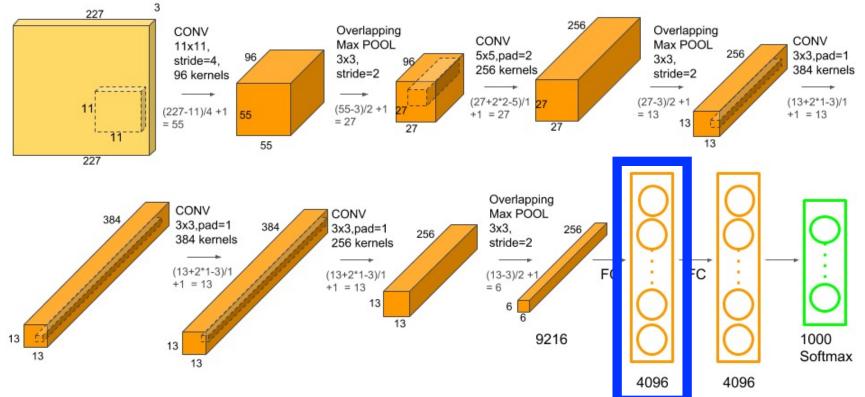

Output CAR PERSON ANIMAL (object identity) 3rd hidden layer (object parts) 2nd hidden layer (corners and contours) 1st hidden layer (edges) Visible layer (input pixels) Deep Learning, Ian Goodfellow, Yoshua Bengio, and Aaron Courville

#### CNN: Pretrained Features (e.g., AlexNet)

What is the dimensionality of the FC6 layer?

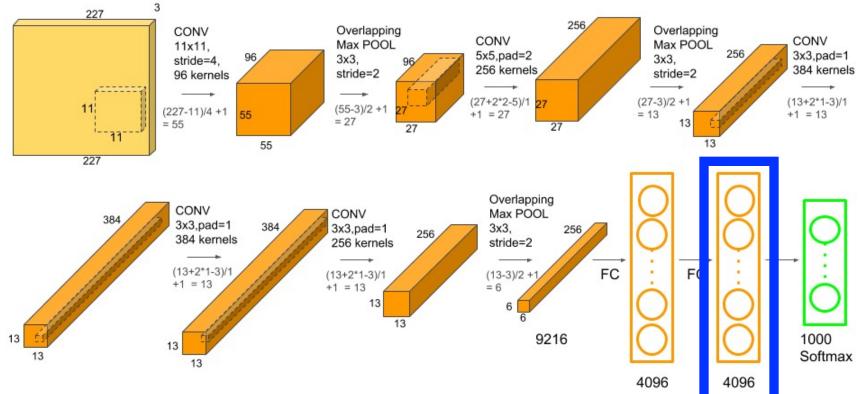

A representation of the data extracted inside a network (rather than the input or predicted output)

#### CNN: Pretrained Features (e.g., AlexNet)

#### What is the dimensionality of the FC7 layer?

A representation of the data extracted inside a network (rather than the input or predicted output)

# Comparing Pretrained CNN Features Extracted by AlexNet Trained on Different Datasets

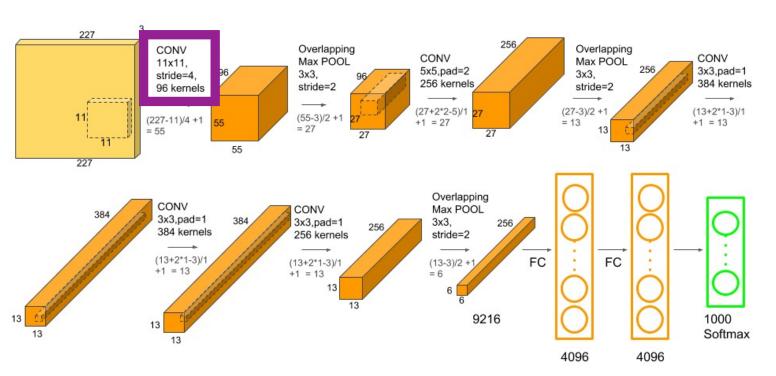

Deng et al. ImageNet: A Large-Scale Hierarchical Image Database. CVPR 2009.

 Dataset 2: Places (~2.5 million images of scenes scraped from search engines)

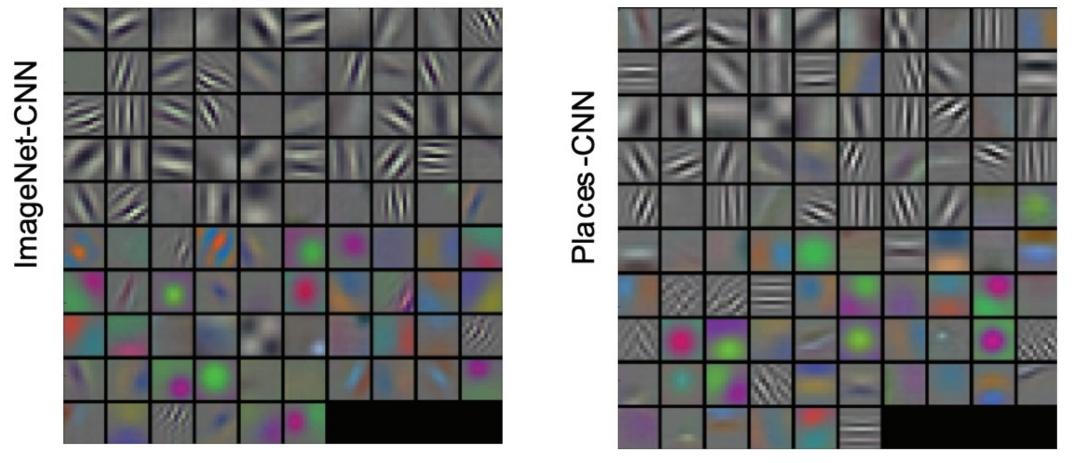

Zhou et al. Learning Deep Features for Scene Recognition using Places Database. NeurIPS 2014.

- Dataset 1: ImageNet (~1.5 million images of objects scraped from search engines)
- Dataset 2: Places (~2.5 million images of scenes scraped from search engines)

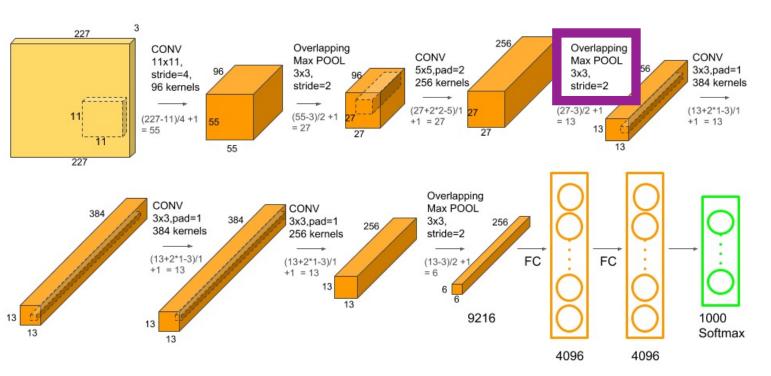

Source: https://www.learnopencv.com/wpcontent/uploads/2018/05/AlexNet-1.png

### Do filters learned from the different datasets look similar or different?

Bolei Zhou et al. Learning Deep Features for Scene Recognition using Places Database. NIPS 2014.

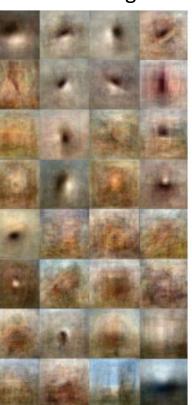

- Dataset 1: ImageNet (~1.5 million images of objects scraped from search engines)
- Dataset 2: Places (~2.5 million images of scenes scraped from search engines)

Source: https://www.learnopencv.com/wpcontent/uploads/2018/05/AlexNet-1.png

Result from singling out different units in the neural networks and then generating the mean image from the 100 images which fire the most (i.e., highest activation scores)

ImageNet-CNN

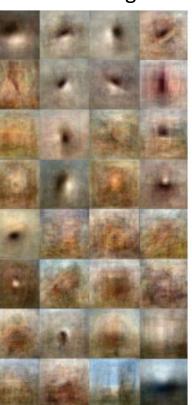

Places -CNN

Bolei Zhou et al. Learning Deep Features for Scene Recognition using Places Database. NIPS 2014.

Result from singling out different units in the neural networks and then generating the mean image from the 100 images which fire the most (i.e., highest activation scores)

ImageNet-CNN

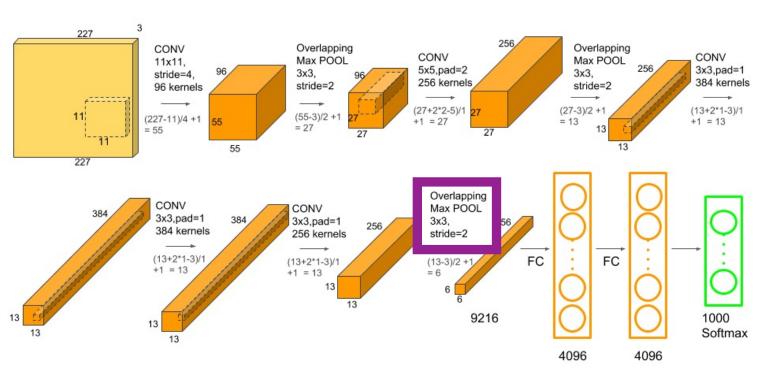

Places -CNN

Bolei Zhou et al. Learning Deep Features for Scene Recognition using Places Database. NIPS 2014.

- Dataset 1: ImageNet (~1.5 million images of objects scraped from search engines)
- Dataset 2: Places (~2.5 million images of scenes scraped from search engines)

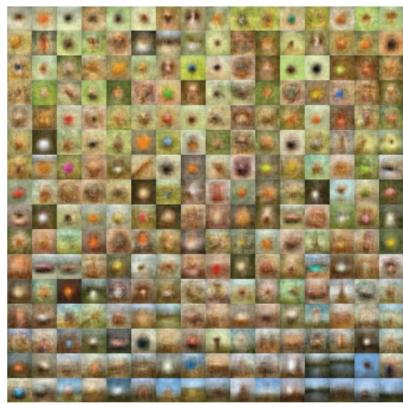

Source: https://www.learnopencv.com/wpcontent/uploads/2018/05/AlexNet-1.png

Result from singling out different units in the neural networks and then generating the mean image from the 100 images which fire the most (i.e., highest activation scores)

Places -CNN

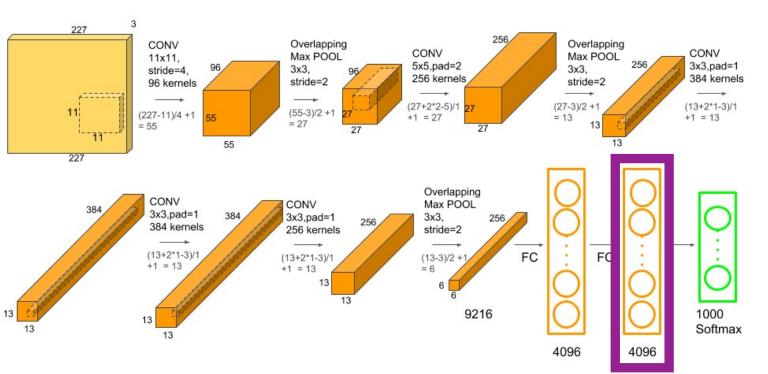

Filters from ImageNet-CNN more often fire on blob-like structures than landscape-like structures

Bolei Zhou et al. Learning Deep Features for Scene Recognition using Places Database. NIPS 2014.

- Dataset 1: ImageNet (~1.5 million images of objects scraped from search engines)
- Dataset 2: Places (~2.5 million images of scenes scraped from search engines)

Source: https://www.learnopencv.com/wpcontent/uploads/2018/05/AlexNet-1.png

Result from singling out different units in the neural networks and then generating the mean image from the 100 images which fire the most (i.e., highest activation scores)

Filters from ImageNet-CNN more often fire on blob-like structures than landscape-like structures

Bolei Zhou et al. Learning Deep Features for Scene Recognition using Places Database. NIPS 2014.

## Summary

- Feature representations are determined by many factors including:
  - 1. The layer used to extract the feature
  - 2. The type of data used to train the model

## Today's Topics

- Representation learning
- Pretrained features
- Fine-tuning
- Training neural networks: hardware & software
- Programming tutorial

## What Neural Networks Learn

A pretrained network can be "fine-tuned" for a different dataset and/or task

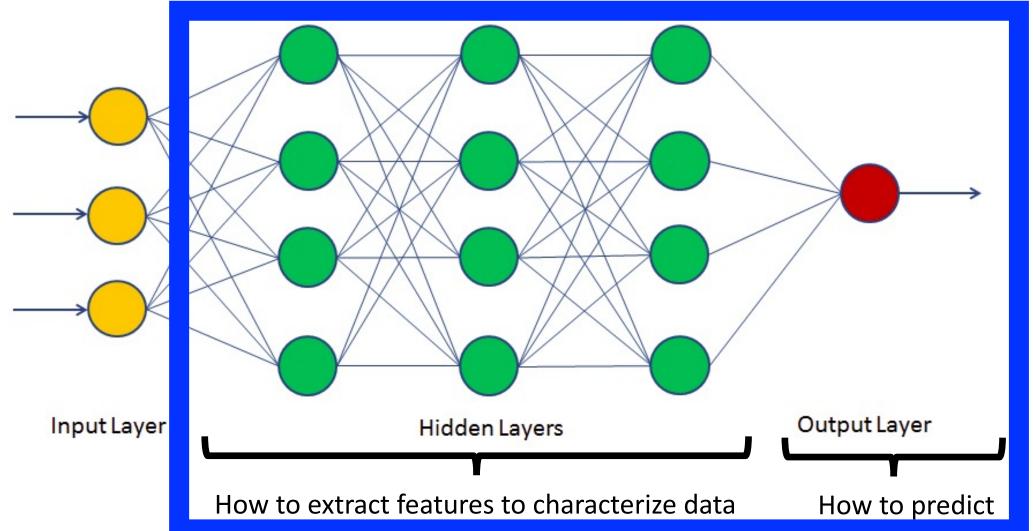

Figure Source: https://www.datacamp.com/community/tutorials/neural-network-models-r

## Fine-Tuning (aka, Transfer Learning)

Use pretrained network as a starting point to train for a different dataset and/or task; e.g.,

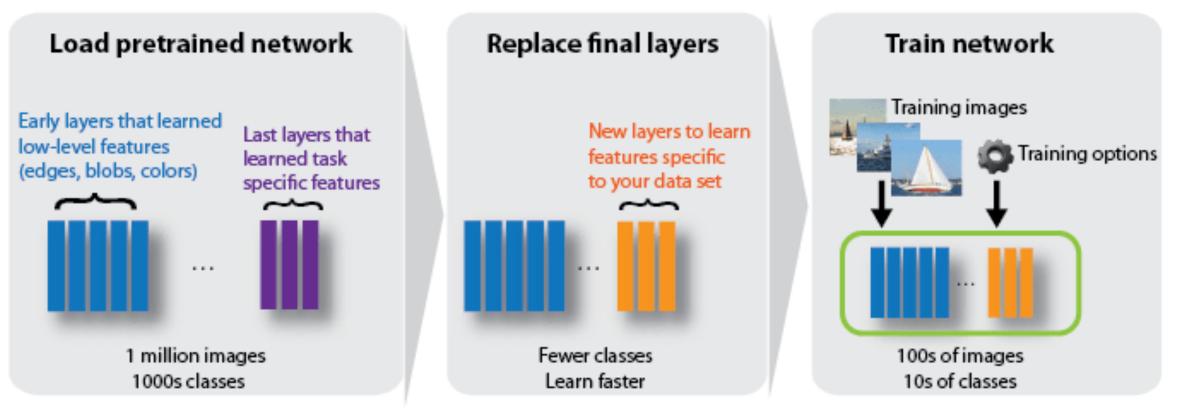

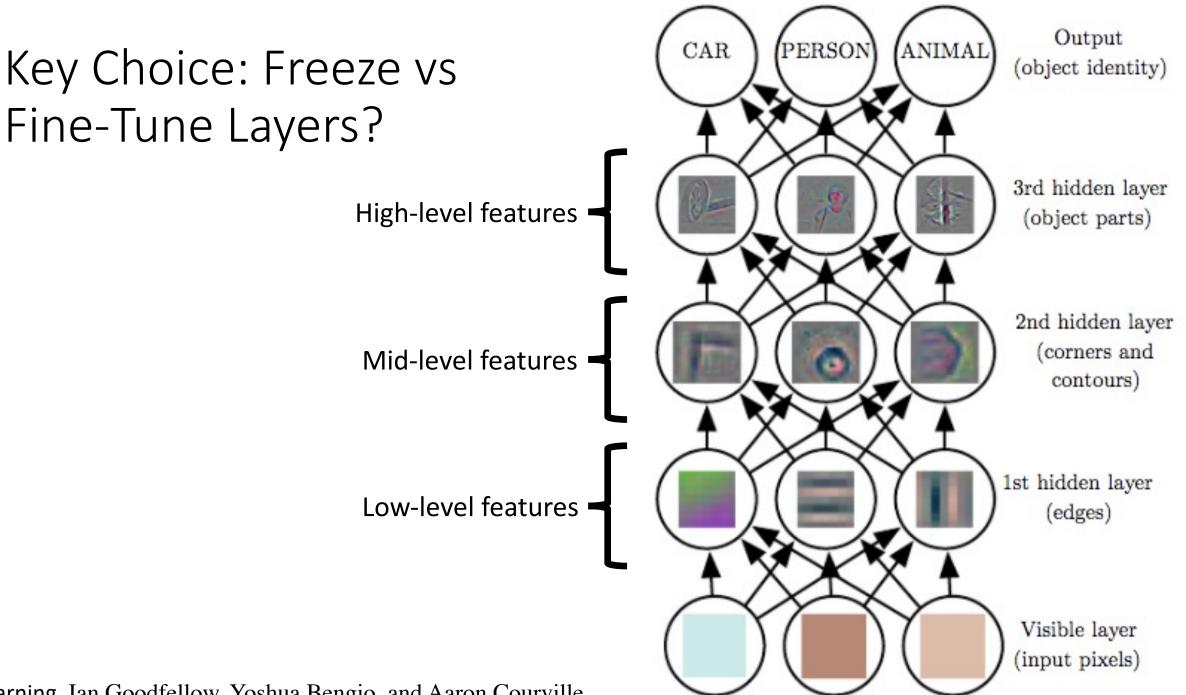

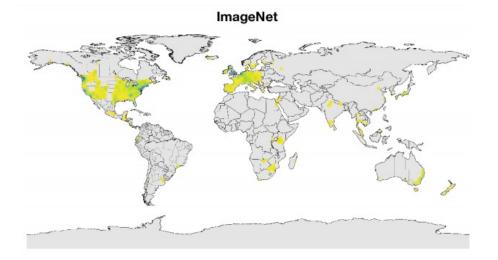

Image Source: https://www.mathworks.com/help/deeplearning/ug/transfer-learning-using-alexnet.html

Deep Learning, Ian Goodfellow, Yoshua Bengio, and Aaron Courville

## Group Discussions

- Assume you need to develop a classifier that recognizes common items in countries with low house incomes
  - 1. If you fine-tuned AlexNet pretrained on ImageNet, which layers would you remove and/or freeze? Why?
  - 2. If a large-scale dataset of low household income items was available, would you train AlexNet from scratch or fine-tune an ImageNet pretrained model? Why?

Recall: Key Ingredients for Success With Neural Networks

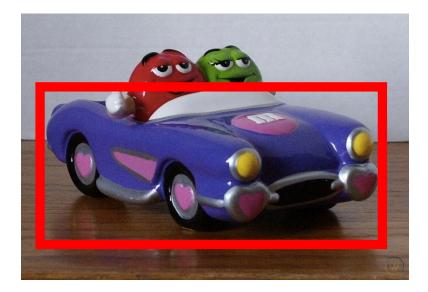

> An **algorithm** learns from **data** on a **processor** the patterns that will be used to make a prediction

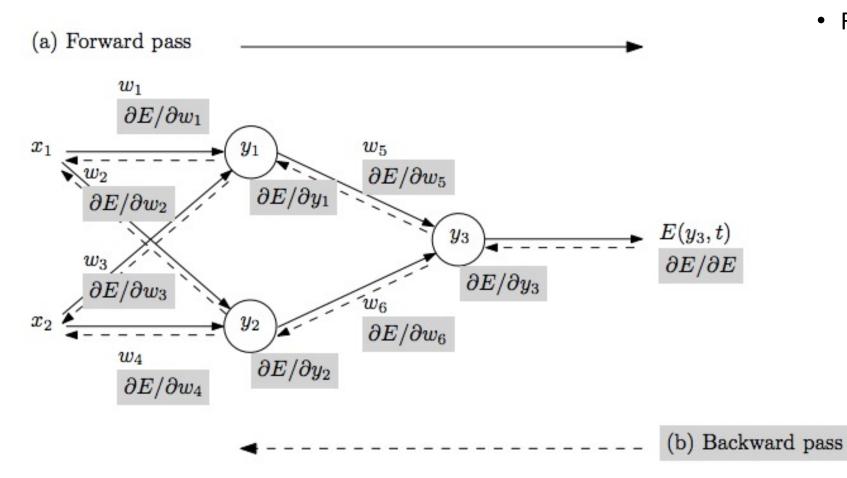

Analogous to a Love Story of Partnering Up and Road Tripping Somewhere

## Recall: Key Ingredients for Success With Neural Networks

### Key Issue: How Long Will It Take to Get There?

## Challenge: Training Neural Network **Requires Many Computations** (e.g., millions of model parameters)

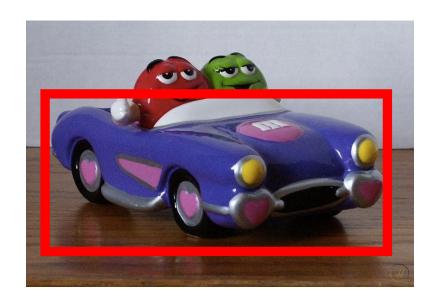

- Repeat until stopping criterion met:
  - Forward pass: propagate training data through model to make prediction
  - 2. Quantify the dissatisfaction with a model's results on the training data
  - 3. Backward pass: using predicted output, calculate gradients backward to assign blame to each model parameter
  - 4. Update each parameter using calculated gradients

Figure from: Atilim Gunes Baydin, Barak A. Pearlmutter, Alexey Andreyevich Radul, Jeffrey Mark Siskind; Automatic Differentiation in Machine Learning: a Survey; 2018

### Idea: Better Hardware

## Idea: Train Algorithms Using GPUs (think Porsche) Instead of CPUs (think Golf Cart)

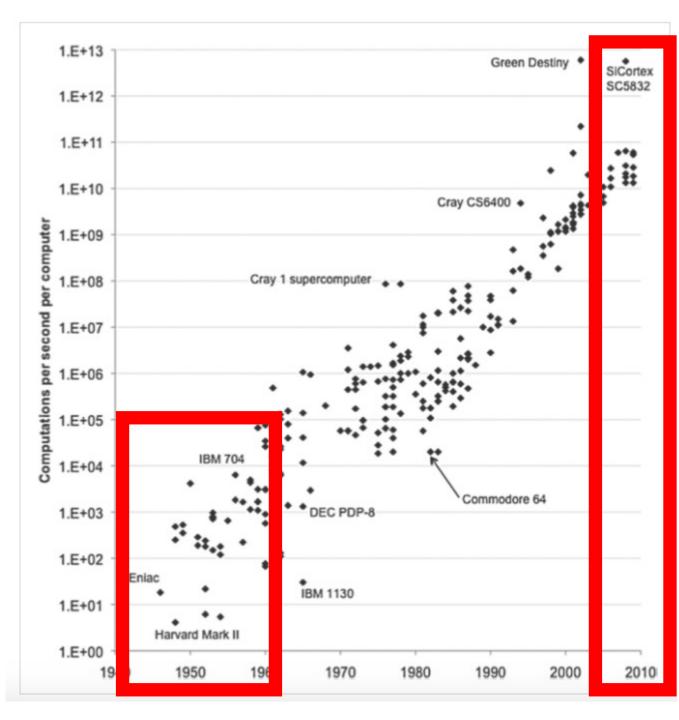

## **Historical Perspective**

- Better Hardware
  - e.g., faster processing -- GPUs

https://ourworldindata.org/technological-progress

## **Historical Perspective**

- Better Hardware
  - e.g., faster processing -- GPUs
  - e.g., more data storage

The IBM Model 350 disk file with a storage space of 5MB from 1956

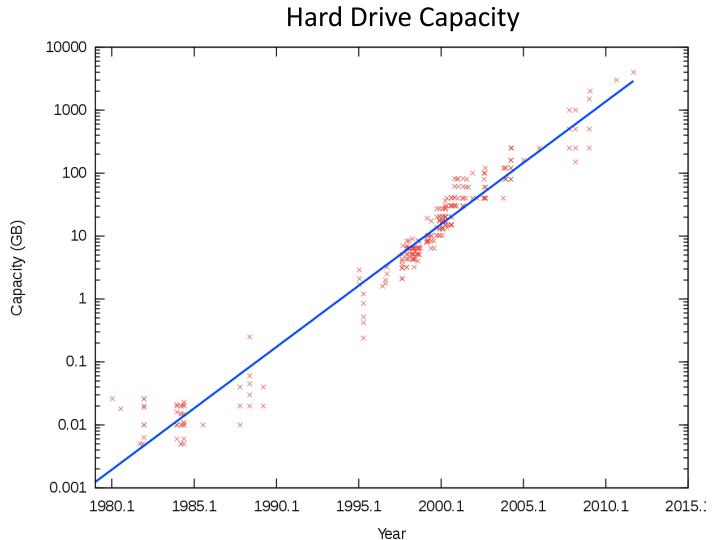

#### https://ourworldindata.org/technological-progress

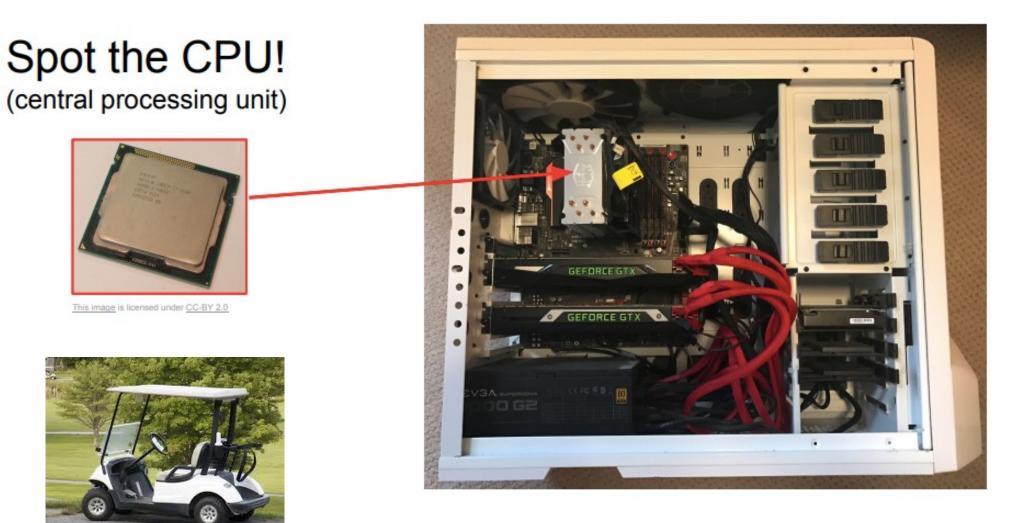

### **Historical Perspective**

- Better Hardware
  - e.g., faster processing -- GPUs
  - e.g., more data storage

https://ourworldindata.org/technological-progress

### Hardware: CPU versus GPU

http://cs231n.stanford.edu/slides/2018/cs231n\_2018\_lecture08.pdf

### Hardware: CPU versus GPU

## Spot the GPUs! (graphics processing unit)

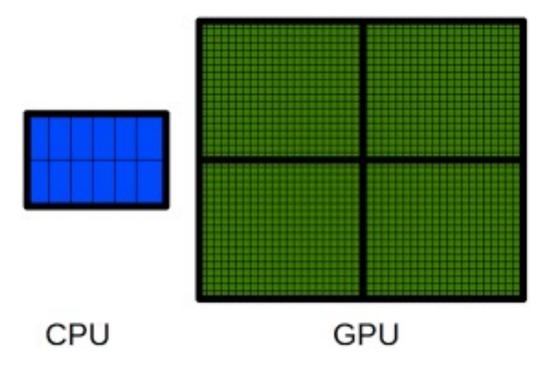

http://cs231n.stanford.edu/slides/2018/cs231n\_2018\_lecture08.pdf

## Hardware: CPU versus GPU

 Graphical Processing Units: accelerates computational workloads due to MANY more processing cores

https://www.researchgate.net/figure/The-main-difference-between-CPUsand-GPUs-is-related-to-the-number-of-available-cores-A\_fig7\_273383346

## Hardware: Training Models with GPUs

### Data is here

If you aren't careful, training can bottleneck on reading data and transferring to GPU!

#### Solutions:

- Read all data into RAM
- Use SSD instead of HDD
- Use multiple CPU threads to prefetch data

http://cs231n.stanford.edu/slides/2018/cs231n\_2018\_lecture08.pdf

## GPU Machines: Rent Versus Buy?

### Rent from Cloud

### (e.g., Microsoft Azure):

| Instance                        | Core(s) | RAM     | Temporary<br>storage | GPU                              | Pay as you go<br>with AHB |
|---------------------------------|---------|---------|----------------------|----------------------------------|---------------------------|
| ND96asr<br><mark>A100</mark> v4 | 96      | 900 GiB | 6,500 GiB            | 8x <mark>A100</mark><br>(NVlink) | <b>\$27.197</b> /hour     |

#### Lambda Bare Metal

4-8x NVIDIA A100 SXM4 GPUs

Install in your Datacenter or Lambda Colo

## Microsoft Azure: Supported Platforms

- Caffe: A deep learning framework built for speed, expressivity, and modularity
- Caffe2: A cross-platform version of Caffe
- Microsoft Cognitive Toolkit: A deep learning software toolkit from Microsoft Research
- H2O: An open-source big data platform and graphical user interface
- Keras: A high-level neural network API in Python for Theano and TensorFlow
- MXNet: A flexible, efficient deep learning library with many language bindings
- NVIDIA DIGITS: A graphical system that simplifies common deep learning tasks
- PyTorch: A high-level Python library with support for dynamic networks
- TensorFlow: An open-source library for machine intelligence from Google
- Theano: A Python library for defining, optimizing, and efficiently evaluating mathematical expressions involving multi-dimensional arrays
- Torch: A scientific computing framework with wide support for machine learning algorithms
- CUDA, cuDNN, and the NVIDIA driver
- Many sample Jupyter notebooks
