

## Lecture 14: Control Flow Graphs

Kenneth M. Anderson  
Foundations of Software Engineering  
CSCI 5828 - Spring Semester, 1999

## Today's Lecture

- White-Box Testing
  - Control Flow Graphs
    - Coverage Criteria

## Testing Approaches

- Black Box Testing
  - Tests are selected based on specification of intended functionality
  - Tester can only see interface to test subject
  - Emphasis on proper use of test subject
- White Box Testing
  - Tests are selected based on internal structure
  - Tester can see inside test subject
  - Emphasis on proper structure of test subject

## White-box Testing: Coverage

- Statement Coverage
- Edge Coverage (*Branch Coverage*)
- Condition Coverage (*Edge Coverage*)
- Path Coverage

Details to follow...

# Flow Graphs

*Graph representation of control flow and data flow relationships*

- Control Flow  
The partial order of statement execution, as defined by the semantics of the language
- Data Flow  
The flow of values from definitions of a variable to its uses

# A Sample Ada Program to Test

```
1  function P return INTEGER is
2  begin
3      X, Y: INTEGER;
4      READ(X); READ(Y);
5      while (X > 10) loop
6          X := X - 10;
7          exit when X = 10;
8      end loop;
9      if (Y < 20 and then X mod 2 = 0) then
10         Y := Y + 20;
11     else
12         Y := Y - 20;
13     end if;
14     return 2 * X + Y;
15 end P;
```

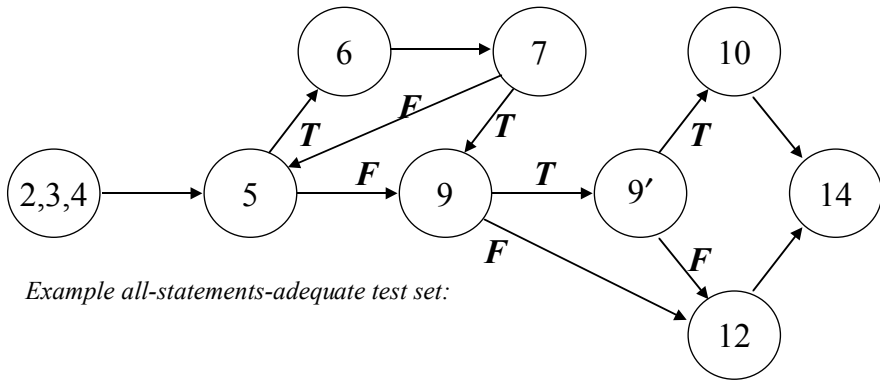

# P's Control Flow Graph (CFG)

# White-box Testing Criteria

- Statement Coverage  
Select a test set  $T$  such that, by executing  $P$  for each  $d$  in  $T$ , each elementary statement of  $P$  is executed at least once

## All-Statements Coverage of P

Example all-statements-adequate test set:

## All-Statements Coverage of P

Example all-statements-adequate test set:  
( $X = 20, Y = 10$ )

## All-Statements Coverage of P

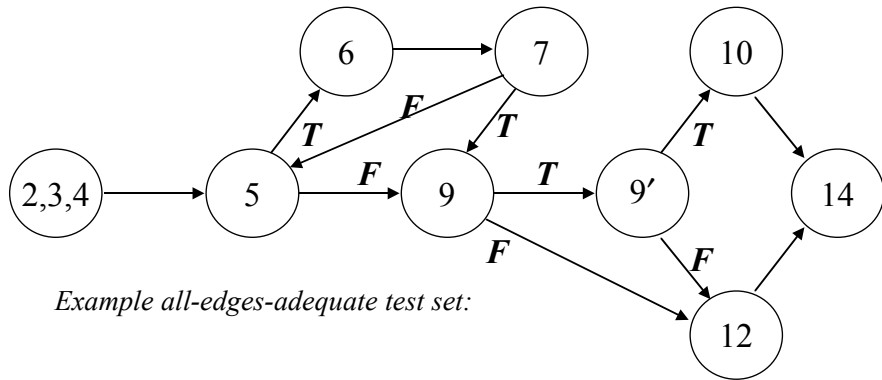

Example all-statements-adequate test set:  
( $X = 20, Y = 10$ )  
( $X = 20, Y = 30$ )

## White-box Testing Criteria

- Edge Coverage

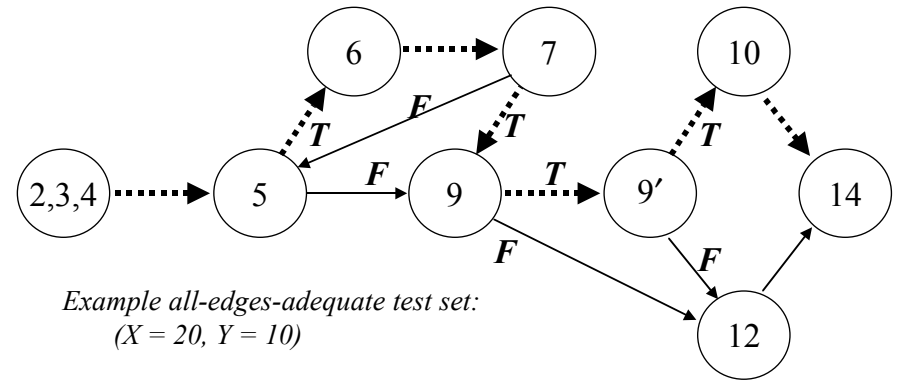

Select a test set  $T$  such that, by executing  $P$  for each  $d$  in  $T$ , each edge of  $P$ 's control flow graph is traversed at least once

## All-Edges Coverage of P

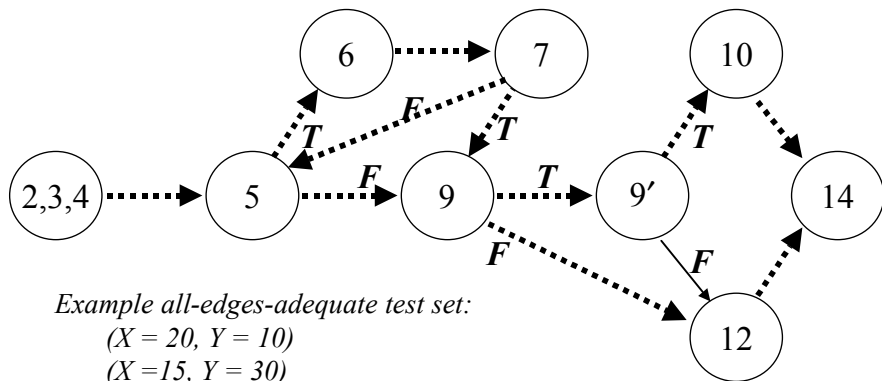

Example all-edges-adequate test set:

## All-Edges Coverage of P

Example all-edges-adequate test set:  
( $X = 20, Y = 10$ )

## All-Edges Coverage of P

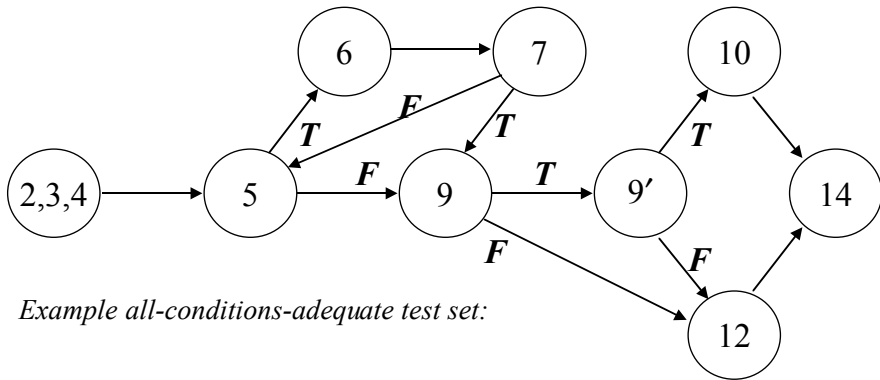

Example all-edges-adequate test set:  
( $X = 20, Y = 10$ )  
( $X = 15, Y = 30$ )

## White-box Testing Criteria

- Condition Coverage

Select a test set  $T$  such that, by executing  $P$  for each  $d$  in  $T$ , each edge of  $P$ 's control flow graph is traversed at least once and all possible values of the constituents of compound conditions are exercised at least once

# White-box Testing Criteria

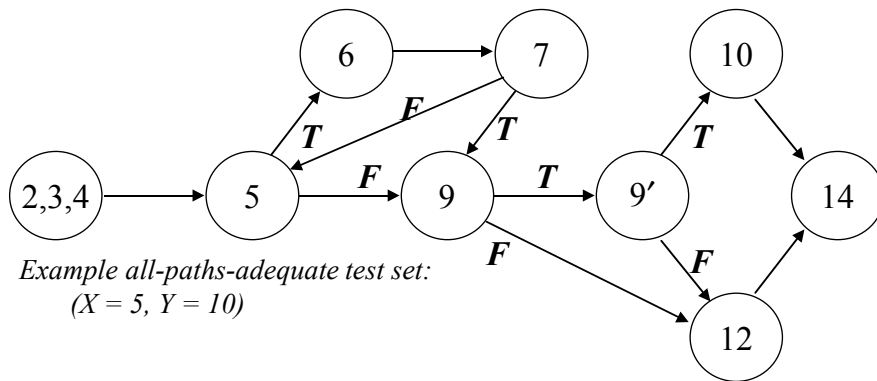

- Path Coverage

Select a test set  $T$  such that, by executing  $P$  for each  $d$  in  $T$ , all paths leading from the initial to the final node of  $P$ 's control flow graph are traversed at least once

## All-Paths Coverage of P

Example all-paths-adequate test set:

- (X = 5, Y = 10)
- (X = 15, Y = 10)
- (X = 25, Y = 10)

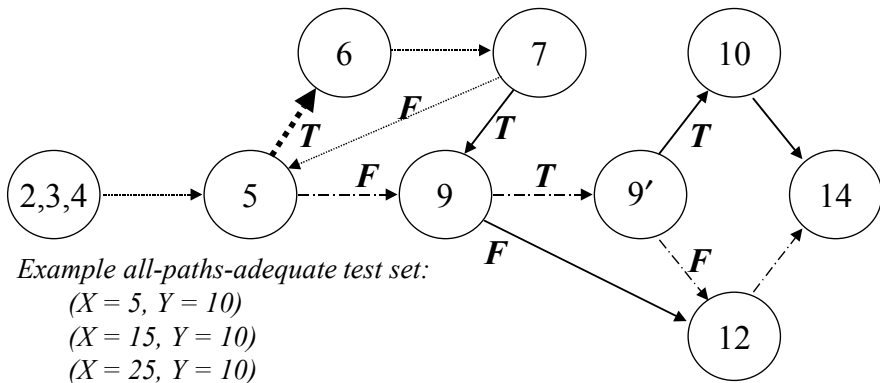

## All-Paths Coverage of P

Example all-paths-adequate test set:

- (X = 5, Y = 10)
- (X = 15, Y = 10)
- (X = 25, Y = 10)

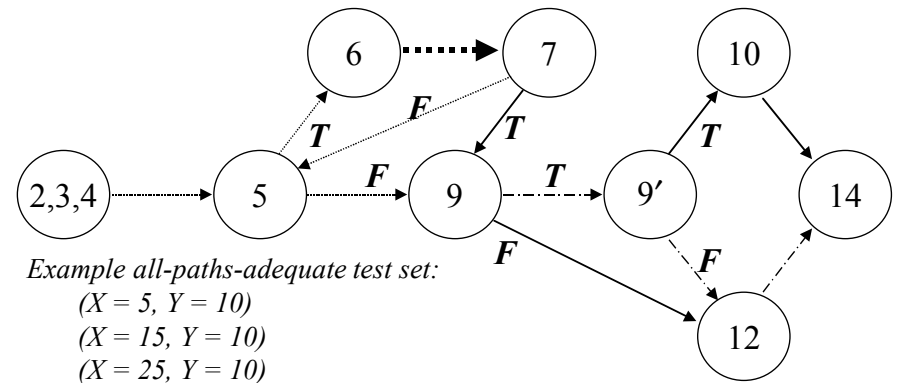

## All-Paths Coverage of P

Example all-paths-adequate test set:

- (X = 5, Y = 10)
- (X = 15, Y = 10)
- (X = 25, Y = 10)

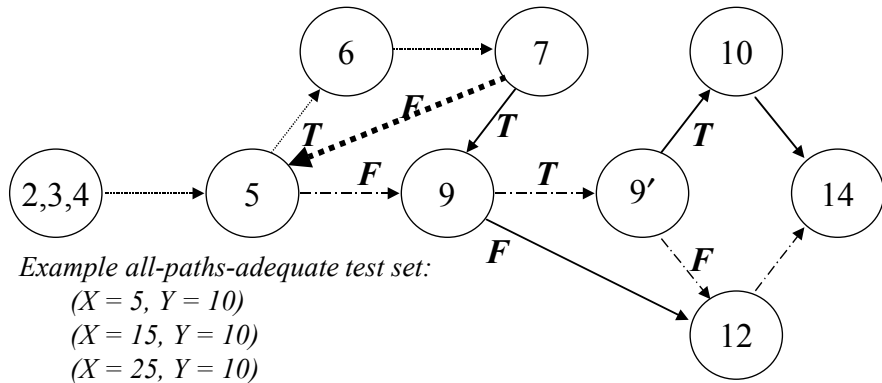

## All-Paths Coverage of P

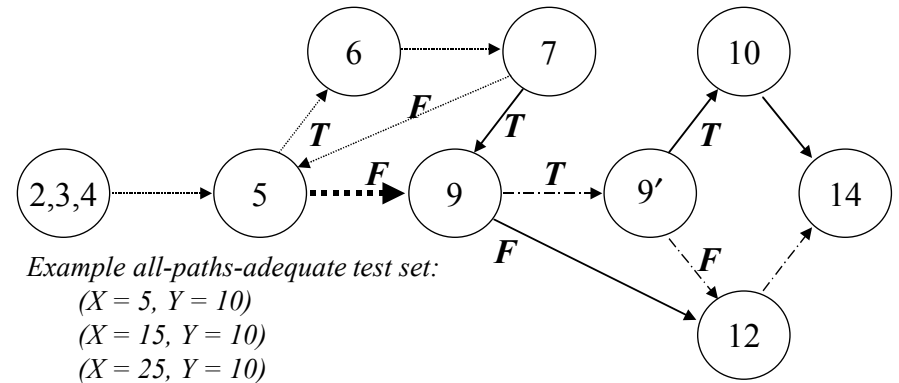

Example all-paths-adequate test set:

- (X = 5, Y = 10)
- (X = 15, Y = 10)
- (X = 25, Y = 10)

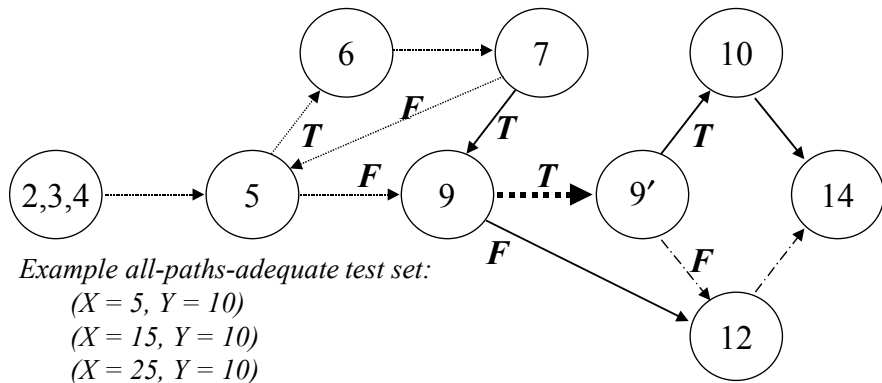

## All-Paths Coverage of P
