#### Today's Lecture • Present Introduction to Formal Software Lecture 11: Introduction to Engineering Formal Software Engineering - Discuss Models - Discuss Formal Notations Kenneth M. Anderson Foundations of Software Engineering CSCI 5828 - Spring Semester, 1999 Lecture 11 1 Lecture 11 2 Formal Software Engineering Software Engineering • Software • Software Computer programs and their related artifacts Computer programs and their related artifacts • Engineering • Engineering The application of scientific principles in the The application of scientific principles in the context of practical constraints context of practical constraints • Formal The use of models, techniques, and tools that are grounded in mathematics

3

Lecture 11

4

Lecture 11

# Some Important Points

- Formal does not mean Hard
- Formal does not mean Good
- Informal does not mean Bad ... unless it means ad hoc

# Some Important Points

- Formal does not mean Hard
- Formal does not mean Good
- Informal does not mean Bad ... unless it means ad hoc

### What Are "Formal Methods"?

5

7

- **O***Writing* a formal specification
- <sup>2</sup>*Proving* properties about the specification
- Constructing a program by mathematically manipulating the specification
- *Verifying* the program by mathematical argument

# Formal SE is Broader

### Not just specification and verification of programs...

- Architecture
- Analysis/Testing
- Reliability and Performance Engineering
- Configuration Management
- Process Management
- And More...

Lecture 11 15	Lecture 11 16

# Analysis of Specifications

• Static Analysis

*Examines* specification text to reveal properties

• Dynamic Analysis

*Executes* specification text to reveal properties

Choice of analysis dictated by focus of concerns and choice of specification style

Lecture 11
